
The bias of the estimators as a function of the time with parameters:
$x_1 = 0.1$
$x_2 = 1.0$
$k = 1\ 000\ 000$
$b(\hat{x}_{1,ML})(t)$
$b(\hat{x}_{2,ML})(t)$
$b(\hat{x}_{1,LS})(t)$
$b(\hat{x}_{2,LS})(t)$
t
